AboutMe

From the first simple html and css page I created I have been fully hooked. Over a year has gone by now where I have made it my goal to learn something new and work on a personal project every day. The more frameworks and libraries I learn the more I know web development is it for me. For the near future I have decided to hone in on React and Sass for Front-End and Express to run the Back-End. However, I have experience with many other libraries and I and would be very eager to learn any other tools that might be required.

Below are a few examples of my more recent projects showcasing some of my more complex ideas. Many more projects can be seen at the GitHub link above.

RelevantExperience

Local Outdoors Info App

(<https://fast-spire-39034.herokuapp.com/>)

Web app I developed to bring all aspects of outdoor sports related information to one place. Built using React, React-Strap, Sass.

Community Page with Authentication

(<https://the54list.herokuapp.com/>)

A place where people who love to climb the 14'ers of Colorado can come to log in and keep record of their peaks. Built with React and React-Strap for front-end. Express and Mongoose round out the back end with bcrypt to help with security purposes.

Product Page with Cart

(<https://river-store.netlify.com/>)

Responsive sample page to experiment with an ecommerce setup. Built using React, Bootstrap, and some simple css.

Landing Page for Local Small Business

(www.tubedurango.com)

Site being built for a small business local to me. Built with React and Sass. Will Utilize Google API for mapping/directions.
