AboutMe

From the first simple html and css page I created I have been fully hooked. Over a year has gone by now where I have made it my goal to learn something new and work on a personal project every day. The more frameworks and libraries I learn the more I know web development is it for me. For the near future I have decided to hone in on React and Sass for Front-End and Express to run the Back-End. However, I have experience with many other libraries and I and would be very eager to learn any other tools that might be required.

Below are a few examples of my more recent projects showcasing some of my more complex ideas. Many more projects can be seen at the GitHub link above.

RelevantExperience

Enterprise Web Admin Dashboard and Native App Package

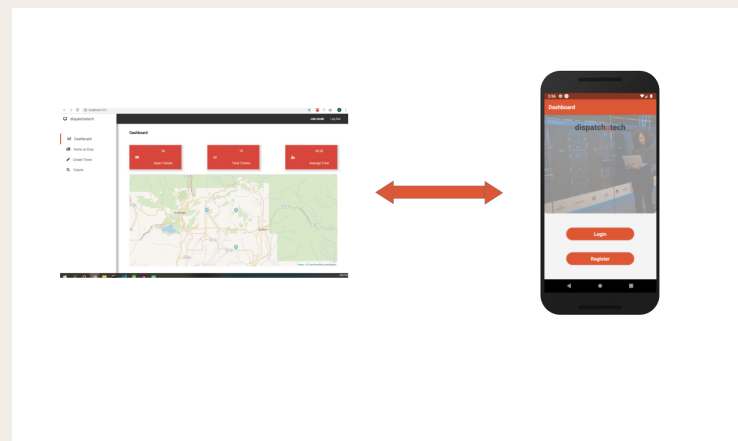

Link to hosted app(s) and github links coming soon, refactoring and polishing now, update 11/13/2019

Web Component

- React/Sass Frontend
- Node.JS backend
- Connects to MongoDB
- Shows Ticket(job) locations on map

Native App

- Built with React Native
- Fetches tickets from Db
- Will notify specific user(tech) when assigned new ticket

Local Outdoors Info App

[\(https://fast-spire-39034.herokuapp.com/\)](https://fast-spire-39034.herokuapp.com/)

Web app I developed to bring all aspects of outdoor sports related information to one place. Built using React, React-Strap, Sass.

E-Commerce Shopping with Cart

[\(https://river-store.netlify.com/\)](https://river-store.netlify.com/)

Responsive sample page to experiment with an ecommerce setup. Built using React, Bootstrap, and some simple css.
